PROFESSIONAL SUMMARY

Data Science undergraduate skilled in machine learning, NLP, and geospatial analytics, with hands-on experience building AI-driven systems, RAG-based chatbots, and predictive models. Proficient in Python and SQL, with strong expertise in developing scalable data pipelines, feature engineering, and model evaluation. Demonstrated ability to transform complex datasets into actionable insights through real-world projects in geospatial analysis, automation, and predictive modeling.

INTERNSHIP EXPERIENCE

AIML Intern

Yaticorp Pvt. Ltd.

📅 2026 – Present

LMS Platform & RAG-Based Chatbot Development

- Engineered a full-stack LMS platform with authentication, dashboards, and course management, improving workflow efficiency.
- Designed and deployed REST APIs for enrollment, progress tracking, and certification workflows.
- Developed a RAG-based chatbot using embeddings and semantic search across 100+ documents.
- Architected data pipelines with chunking, embeddings, and LLM-based retrieval mechanisms.
- Enabled bilingual support (English and Kannada) to improve accessibility.

Technical SEO & Google Search Console Audit – Yaticorp Website

- Collected and processed indexing data from Google Search Console to build structured datasets.
- Analyzed indexing issues (Crawled–Not Indexed, redirects, canonical conflicts) to identify bottlenecks.
- Conducted sitemap and URL pattern analysis to eliminate duplicate and parameterized pages.
- Evaluated metrics such as impressions, CTR, and zero-traffic pages.
- Recommended frontend, backend, and metadata optimizations to improve search visibility.

PROJECTS

AI-Powered UHI Mitigation & Energy Optimization

Python, QGIS, Google Earth Engine

- Analyzed satellite-based LST data to identify Urban Heat Islands using geospatial techniques.
- Performed feature engineering and regression modeling to study land cover and temperature variation.
- Applied machine learning and spatial analysis for mitigation and energy optimization strategies.
- Automated preprocessing and geospatial workflows using Python pipelines.
- Developed interactive visualizations for stakeholder insights.

AI Resume Screening Automation System

Python, n8n, LLM APIs, REST APIs

- Designed an automated resume screening system to rank candidates efficiently.
- Built scalable pipelines to extract, clean, and process resume data using NLP.
- Implemented candidate scoring algorithms based on skills and experience.
- Integrated REST APIs and workflows for efficient processing and reporting.
- Generated structured outputs to support recruiter decision-making.

Real Estate Price Prediction

Python, scikit-learn, Flask, MySQL

- Conducted EDA and regression modeling to predict property prices with 85% accuracy.
- Engineered features based on location and property attributes to improve performance.
- Evaluated models using cross-validation and performance metrics.
- Developed a Flask web interface with MySQL integration for real-time predictions.

EDUCATION

B.E. in Computer Science and Engineering

Alvas Institute of Engineering & Technology

📅 2022–2026

CGPA: 7

PUC (PCMB)

Nirmala Composite PU College, Kumbta

📅 2020–2022

Percentage: 70%

SSLC

Nirmala Convent, Kumbta

📅 2019–2020

Percentage: 84%

SKILLS

Python SQL Machine Learning
Data Analysis Feature Engineering
Model Evaluation NLP LLMs RAG
Data Pipelines EDA Data Visualization

TOOLS & PLATFORMS

Data & Analytics: Pandas, NumPy, MySQL, Google Earth Engine, QGIS

Development: Flask, Streamlit, REST APIs

Tools: Jupyter Notebook, Google Colab, Git & GitHub, VS Code, Google Search Console

CERTIFICATIONS

- ★ IBM: Machine Learning
- ★ IBM: Data Analysis
- ★ IBM: Data Visualization
- ★ Coursera: Neural Networks & Deep Learning

LANGUAGES

English
Kannada
Hindi
